- Enterprise Solutions
- HR Platforms
- B2B/B2C/C2C Solutions
- Searching platforms on Apache Solr

# E-commerce Marketplace Solutions

---

SCAND team has a successful track record in developing easy-customizable software solutions that allow to manage and support e-commerce marketplaces, including Product Information Management, Online Product Catalog management, Procurement management, Invoice Process Automation, etc.

E-commerce Software  
to Support Market Places

# Delivery Service Solutions

---

SCAND team is skilled in developing delivery service solutions that ensure efficient management for the customer and easy use for a client. These solutions can be integrated with Google services, local payment systems, and mail services.

Parcel Delivery Service

# Enterprise E-commerce Solutions

---

We also develop enterprise e-commerce solutions that facilitate the routine task workflow. They can be easily integrated with different systems like Oracle, SAP, Magento, Salesforce, etc.

# HR Management Platforms

---

SCAND team has experience in creating HR management software solutions for a variety of business domains as well as HR platforms for job cross postings.

Posting Automatization

# B2B/B2C/C2C E-commerce Solutions

---

SCAND software engineers have expertise in creating e-commerce websites and portals for selling various goods and services like homes, food, cars and auto parts, fashion goods, clothes and many more. We also have experience in integrating with different payment processing systems. Working with the Hybris system we broaden traditional omni-channel solution functions providing access to online and offline order history, the creation of trade accounts and individual price lists, data sheets download, the performance of single checkout processes, combining 'click and collect' with delivery options.

# E-commerce Search Platforms

---

Our development team has experience in creating searching platforms based both on Apache Solr. These solutions improve search speed, implement different filtering, make the platforms compatible with mobile devices, and ensure proper data migration.
